Something strange is cooking in the kitchen -- in the shape of a robotic chef.The device is able to select ingredients, mix and stir ingredients and cook up dishes like spaghetti Bolognese.The machine features a dexterous robot integrated into a luxury kitchen, that prepares freshly-cooked meals at the touch of a button.It was created by British technology company, Moley Robotics, the systemThe product took six years research and development by an international team of 100 engineers, product and luxury interior designers and three award-winning chefs.At the heart of the new technology are two robotic arms featuring fully-articulated 'hands', developed in collaboration with world-leading German robotic company SCHUNK, Moley's exclusive hand partner. It went through 11 exhaustive development cycles they reliably reproduce the movements of human hands. This means the robot kitchen can retrieve ingredients from the smart fridge, adjust hob temperature, use the sink to fill pans and pour, mix and plate up just as a human cook would. The robot even cleans up after itself without complaint.

OPS: The built-in robot chef creating and serving meals.
