Title

Graphite mining in China

Creation date

20170705

Caption

July 6, 2017 - Jixi, Heilongjiang, China: A worker covered in graphite dust inside a warehouse where graphite is processed. Graphite is a key component of batteries, which are increasing in size due to the growth of the electric car industry, which relies on batteries to power its vehicles. China is the world's largest and cheapest producer of graphite, but the industry has had detrimental effects on the environment. (Dave Tacon/Polaris) (FOTO:DUKAS/POLARIS)
