Divers exploring the underwater cave system

Exploring unexplored cave system beneath the jungle, Yucatan peninsula, Mexico - Nov 2017

*Full story: <https://www.rexfeatures.com/nanolink/u6qe>

Buried beneath the jungle in Mexico is an eerie subterranean world of submerged caves that remain virtually unexplored. Beneath the lush greenery of the Yucatan Peninsula the world's largest underwater cave systems exist. Over the past few years multi award-winning photographer and scientist Klaus Thymann has been braving these mystical blue depths to go to places that have never been visited by man before. Access to the water is through an extremely narrow, ten-meter deep shaft located in the middle of the jungle. Once through this unassuming shaft it opens up into a breathtaking cave of crystal clear turquoise waters and stunning natural formations. During his most recent expedition Klaus and his partner Alex Reato discovered fully intact Mayan crockery suggesting that they once collected fresh water from here.
