Pictured: Tim explains how he took the image, "After making the glass bottom feeder, I supported it with a simple wooden tripod and then set up my camera. I used a wireless remote to trigger the shutter". A photographer has captured the moment a flock of peckish birds tuck in to their lunch - by setting up his camera below a glass feeder. The group of common redpols spotted the food from a distance and swooped in to enjoy a meal that had been put out for them. And the hungry birds were not phased that their actions were being caught on camera that was cleverly positioned underneath the glass feeder. Snapper Tim Grams, from Anchorage, Alaska, US, made the bird feeder out of glass in order to get a new perspective on birds and how they eat Â© Timothy R Grams/Solent News & Photo Agency UK +44 (0) 2380 458800 (FOTO: DUKAS/SOLENT NEWS)
