An artificial intelligence device is set to bring virtual companions or lost loved ones or friends to life. The Euvola device has been developed to be an always-there presence for memory, empathy, and comfort according to the developer.

The mobile phone-like screen sits next to a base from where the angle of view can be changed.

The screen shows either a generated image of one that a user can upload.

The images are animated with micro-expressions and a matched voice, bringing a chosen person back into the world.

Over time, it is claimed that the device's AI evolves through conversation, becoming ever more understanding and supportive.

The AI software is called the Evolving Memory System according to Hong Kong based maker SmartApe Tech.

It blends long-term memory, short-term recall, and real-time empathy by dynamically managing context around a large language model or LLM.

LLM is a type of artificial intelligence that is trained on massive amounts of text data to understand and generate human language.

Users can upload a voice clip and photo to bring the likeness of someone they miss into lifelike digital presence.

They could also animate a favourite celebrity.

It is claimed that Euvola's AI listens with psychological insight and responds with "like a friend who really gets you."

OPS: Euvola virtual companion device.
