Caption
A powerful Mediterranean storm system, named Alice, batters southern Catalonia with record-breaking rainfall, triggering flash floods, road closures, and mass evacuations. Over a thousand residents spend the night in temporary shelters as emergency crews work to rescue stranded motorists and clear debris. The heaviest damage is reported in the Ebro region, where overflowing rivers inundate streets and farmland in Catalonia, on October 13, 2025. (Photo by Albert Llop/ NurPhoto)
