A caterpillar and ladybird share a moment

Insect photography by Petar Sabol - Jul 2016

Full Story Available. Please contact your account manager for written feature.

This magical photo series turns the spotlight on bugs' often overlooked beauty.

Butterflies, caterpillars, dragonflies, moths and even a shy ladybird flit around in these mesmerising macro photographs. The stunning detail of dewdrops on a dragonfly and the comedy of a fly riding a butterfly make for a photo series to win over even the most stubborn insect-haters.
